Dear Public Service Commissioners

As a concerned Utah citizen, I strongly encourage the Utah PSC to require Rocky Mountain Power (RMP) to open its books on the cost of coal power compared to solar and wind renewables. The costs of solar and wind power are dropping rapidly. Coal power is heavily polluting in both particulates and CO2 and other waste gasses. CO2 drives Climate change, which is an existential threat to humanity. See the reports from NASA and the IPCC on the climate. Jobs in the growing solar and wind power industry way out number the jobs in the coal power industry in Utah and Nationwide.

I strongly urge the PSC to have RMP reconsider its very weak plan to only have 20% renewable power by 2038. Utah will be left behind by our neighboring states which will be approaching or attaining 100% renewable power by then.

The times are changing fast. We need clean power and jobs now. We need clean air and water and mitigation of the worst effects of Climate Change.

I would like to hear your comments by return email.

Thank you for reading this,
